

ABSTRACT

The invention relates to methods and products for
5 the preparation of antigen presenting cells, and for the
modulation of T cell activation, for example to prepare
activated T cells. The invention further relates to antigen
presenting cells and activated T cells thus prepared. The
invention further relates to methods and uses of such antigen
10 presenting cells for activation of T cells *in vitro*, *ex vivo*,
or *in vivo*, for treatment of e.g. a condition associated
with immuno impairment, or for vaccination. The invention
further relates to methods and uses of such activated T cells
for treatment of e.g. a condition associated with immuno
15 impairment.
